

FAST FORWARD YOUR LEGACY

WITH DATA MIGRATION AS A SERVICE

tlconsulting.com.au

enquiries@tlconsulting.com.au

BENEFITS

- > Automated Data Migration
- > Handles large datasets
- > Flexible engagement models
- > Pro-Serve Data Advisory
- > RPA Solution Delivery
- > High Accuracy & Quality
- > No licensing costs
- > Secure & Compliant
- > Return on Investment (ROI)

LATEST CASE STUDY

Leading Entertainment Company

Accuracy

100%

Migration Time

3 DAYS

Project Budget

15% UNDER

Scalability

200+ PROJECTS

Problem Statement

This leading entertainment company had multiple Jira & Confluence instances setup, each team using their own workflows and conventions.

It was quickly realised that there was a need to standardise the application utilisation and centrally own and manage the application because of their importance in compliance and knowledge preservation purposes.

As a result, consolidation had to take place between the different instances to keep all the information under one roof, and to minimise the management overhead to maintain these tools.

DMaaS Solution

TL Consultings DMaaS framework combines our Pro-serve team data advisory and analysis capabilities, with our own in-house built RPA Data Migration BOT solution.

The DMaaS capability caters for all the Client requirements and success criteria, with the DM-BOT being an RPA solution accelerator, automatically migrating and shifting large data volumes, while managing data integrity and relationships following a proven agile methodology (scrum).

The benefits of the DM-BOT solution include increasing accuracy and quality, intelligent automation, big data migration, efficiency and ROI to name a few.

Client Outcomes

We were able to exceed clients expectations as we delivered the migration faster than we had planned, and under budget by 15%. As part of the migration inter-systems links between 6 systems were updated automatically, object relations, links and data format conversations were migrated effectively, and Azure Active Directory authentication was handled. The data extraction, transformation, validation and migration process was all automated by leveraging the DM-BOT solution delivering major benefits for our client.

"TL Consulting were extremely committed to delivering the project on time and on budget. Availability & professionalism were great, and the resources were highly technically skilled." – Practice Manager
